State Aid Scoreboard 2016:

Results, trends and observations regarding EU28 State Aid expenditure reports for 2015

1. INTRODUCTION

Under Article 6(1) of Commission Regulation (EC) 794/2004, the Commission has to publish, annually, a State aid synopsis ("State Aid Scoreboard") on the basis of the expenditure reports provided by Member States.

This note is an internal report that presents state aid expenditure data for 2015 as reported by Member States¹ and summarises the main findings by focusing on the most relevant observed changes between 2014 and 2015.

Expenditure refers to all existing aid measures to manufacturing industries, services, agriculture and fisheries, for which the Commission adopted a formal decision or received a summary information sheet from the Member States in relation to measures qualifying for exemption under the Block Exemption Regulation. In practice, the figures provided exclude most of the aid to railways and services of general economic interest. Also, crisis aid to the financial sector is dealt with separately.

The note furthermore provides an overview of reported expenditure under the main dimensions of reporting, namely by GBER use, objective, aid instrument and co-financing.

Finally, the overall observations are underpinned by further information. [Annex 1](#) provides additional material (illustrative tables and charts) to allow a more informed reading of the Scoreboard results; and [Annex 2](#) contains country fiches, which have been shared with

¹ As a matter of fact, the main findings and insights presented in this note reflect the information as reported and validated by Member States before publication.

Member States for consultation and verification of the reported expenditures. The country fiches contain the final figures to be published.

2. OVERALL TRENDS

According to the national expenditure reports for 2015², **Member States spent EUR 98.2 billion, i.e. 0.67% of GDP, on state aid** at European Union level (see [Graph 1](#)), a decrease of about 0.04p.p. of GDP compared to 2014. In nominal terms, this represents a slight decrease of about 0.5% compared to 2014 expenditures (- EUR 456 million).

Graph 1 – Total State Aid expenditure, excluding aid to railways as % of GDP

Source: Commission services.

Note: A large part of the increase in reported total expenditure that has been observed from 2014 compared to previous years is due to inclusion of renewable energy systems schemes (RES). Indeed, both years 2014 and 2015 showed an increase of the reported State Aid on environmental protection and energy savings, of about +26.6 and +3.3 billion EUR for 2014 and 2015 respectively at EU level.

It should be also kept in mind that some Member States have not yet reported all the equivalent measures on Renewable Energy Sources (RES)/Combined Heat and Power (CHP) and still argue that the support measures at stake would not constitute State aid. Moreover, in some cases, the reporting has been made only for 2014 and/or 2015 while the measures may well also cover previous years.

In light of the jurisprudence, we may therefore expect in the future a more consistent and continuous reporting of state aid to renewables that would imply higher reported expenditure.

² Submitted in conformity with Article 6(1) of Commission Regulation (EC) 794/2004

About 46% of total spending is attributed to state aid to environmental and energy savings mainly following the inclusion of renewable energy systems schemes (RES) in line with the Commission decision 2014/C 200/01 to improve the accuracy of accounting for aid to renewables. **Without state aid to environmental and energy savings, Member States spent about EUR 53 billion, i.e. 0.36% of GDP, on state aid at European Union level (see Graph 1).** In nominal terms, this represents **a stronger decrease of about 6.6% compared to 2014 expenditures (- EUR 3.7 billion)³.**

As regards both levels and changes in total expenditure, large differences between Member States can be observed (see Graph 2). The highest **increase** in expenditure is recorded in Czech Republic (+0.5p.p. of GDP). Other Member States, i.e. Greece (+0.3p.p. of GDP), Lithuania (+0.3p.p. of GDP), Denmark (+0.3p.p. of GDP), Austria and Croatia (+0.2p.p. of GDP) also recorded larger increases. On the contrary, a substantial **reduction** in State Aid expenditure has been observed in Latvia (-0.7p.p. of GDP), Poland (-0.4p.p. of GDP), Finland, Hungary and Ireland (-0.2p.p. of GDP).

Graph 2 – Total State Aid expenditure as % of GDP in 2014 and 2015

Source: Commission services.

³ When comparing State Aid expenditure as % of GDP for the two last three years periods i.e. 2010-2012 and 2013-2015, the trend shows a clear decrease of about 0.07% of GDP (with respectively a total expenditure of about 0.47% and 0.39% of GDP for the two selected periods).

For EU28, the overall change in reported State Aid expenditure in 2015 compared to 2014 can largely be explained by the following factors (see [Graph 3](#)):

Graph 3 – Overall change in state aid expenditure by objective between 2014 and 2015 in the European Union, excluding Agricultural aid (in millions EUR)

Source: Commission services.

(1) A strong decrease of **state aid for regional development** of about 4.8 billion EUR that has been observed in particular in Germany (-2.2 billion EUR), Poland (-1.1 billion EUR), France (-1 billion EUR), Spain (-677 million EUR), Hungary (-411 million EUR) and Italy (-351 million EUR). This is largely due to the non-prolongation of a number of measures following the adoption of the new 2014-2020 Regional Aid Guidelines entailing in particular a redefinition of eligible regions and allowed aid intensities to ensure the proper targeting of regional aid towards the weakest regions.

(2) A decrease of **state aid on research and development including innovation** of about 1 billion EUR was mostly observed in France (-1 billion EUR) and Germany (-466 million EUR), due in particular to the expiry of several schemes related to innovation⁴.

(3) An increase of **state aid to environmental protection including energy savings** of about 3.3 billion EUR. The increase compared to 2014 is most noticeable in Germany (+1.1 billion EUR) through an increase of spending of existing RES schemes, followed by Denmark (+885 million EUR) through an electricity tax reimbursement scheme under Directive 2003/96/EC, and Austria (+586 million EUR), where in particular an increase of spending for the preferential treatment of energy intensive businesses and the inclusion of a tax rebate for energy producers have been reported⁵.

(4) An increase of **state aid for culture** of about 1.1 billion EUR in 2015, that has been observed notably in Germany (+559 million EUR), the United-Kingdom (+322 million EUR), Italy (+227 million EUR) and France (+199 million EUR). Generally, this concerns the inclusion of a number of schemes adopted under the new General Block Exemption Regulation that has introduced the new category of aid for culture which covers a wide scope of cultural purposes and activities (see also [Graph 9](#)).

(5) An increase of **state aid for employment** of about 400 million EUR that is almost entirely due to a strong increase observed in Italy (+577 million EUR) following the introduction of two big GBER schemes to ease labour market participation of disabled and disadvantaged workers⁶.

(6) An increase of **state aid for social support to individual consumers** of about 307 million EUR that is almost entirely due to France (+314 million EUR) through aid provided to finance old pension schemes for staff having had a civil servant status before 2006⁷.

⁴ SA.37993 – Régime OSEO; N 106/2010 - Financements des CTI et des CPDE; SA.37994 - Jeunes Entreprises Innovantes (J.E.I.); SA.35118 - Zentrales Innovationsprogramm Mittelstand (ZIM)

⁵ SA.33384 - Green Electricity Act 2012; SA.40192 - Energieabgabenvergütung für Produktionsbetriebe

⁶ SA.39197 – Inserimento occupazionale attraverso il contratto di apprendistato di alta formazione e ricerca; SA.42861 - Bonus Occupazione

⁷ C 43/2006 - Réforme du mode de financement des retraites des fonctionnaires de l'Etat rattachés à La Poste

Finally, (7) the downward trend in **aid given to the agricultural and forestry sectors** observed over the last 5 years has slightly continued in 2015 (see [Graph 1](#)). Agricultural aid decreased by about 249 million EUR, mostly due to a strong decrease in a few Member States, notably France, Germany and Finland, that compensated for the strong increase observed in other Member States such as Italy and the Czech Republic. This can be partly explained as a consequence of the EU's common agricultural and rural development policies. In particular, many schemes and pre-accession schemes came to an end in 2015.

The figures reported for the remaining aid objectives in 2014 and 2015 are on the contrary broadly comparable (see [Graph 4](#)).

Graph 4 – State Aid expenditure by objectives in 2014 and 2015 (millions EUR)

Source: Commission services.

* The number indicated in parenthesis next to the objective indicates the absolute change in millions EUR between 2014 and 2015.

** The State Aid expenditure for the objective on environmental protection and energy savings is not shown in the chart.

The Scoreboard also shows that Member States made **extensive use of the new rules exempting additional categories of unproblematic measures from prior Commission scrutiny** (the new **General Block Exemption Regulation**).

More than **96%** of new measures for which expenditure has been reported for the first time were of a GBER nature in 2015, i.e. an increase of about 24p.p. compared to 2013 (see [Graph 5](#)). Looking at all measures for which expenditure has been reported and not only new measures, 75% of all measures in 2015 were block exempted measures in 2015. In terms of spending, total expenditure on GBER measures in the EU represented about 30 billion euros i.e. about 30% of total expenditure in 2015. However, as shown in the graph, when this is proxied by a simple average to reflect equally differences in Member States practices, it appears that Member States spend on average about 40 % of the total spending on GBER measures in 2015.

Graph 5 – Use of GBER in State aid cases for which expenditure has been reported in the EU, 2010-2015

Source: Commission services.

On top of a broadening of categories already covered by the previous GBER, the new rules have introduced new categories of aid into the GBER, namely aid to innovation clusters and aid to process and organisational innovation, aid schemes to make good the damage caused by natural disasters, social aid for transport residents of remote regions, aid for broadband infrastructure, aid for culture and heritage conservation, including aid schemes for audio-visual works, aid for sport and multifunctional recreational infrastructures, and investment aid for local infrastructure.

To a large extent, the reported expenditure on GBER measures did already reflect the impact of the new regulation in 2015 (see [Graph 6](#)). Total GBER spending for aid to culture and heritage conservation almost tripled, while strong increases were recorded for aid to compensate damages caused by natural disasters (+53%), for training aid (+41%), for environmental protection and energy savings (+22%), for employment aid (+32%) and for SMEs (+19%).

Graph 6 – Spending on GBER State aid cases by objectives, 2013-2015

Source: Commission services.

In general terms, **Member States use state aid for rather different objectives** (see [Graph 7](#)). In 2015, a majority of 15 Member States spent state aid mostly for an environmental or energy objective, while culture was the main objective for Ireland, Belgium, Hungary and Latvia. Regional development was the main expenditure item in Lithuania, Slovakia, the Czech Republic, Portugal, Bulgaria and Greece. Finally, the main objective was rescue and restructuring in Malta, Research, development and innovation in Italy, sectorial development in Spain and social support to individual consumers in France. In some Member States, the **spending was very concentrated** on one single main objective, in fact the share of spending for the main primary objective was higher than 60% in Denmark, Finland, Austria, Estonia, Luxembourg, Sweden, Germany, Portugal, Bulgaria and Greece.

Graph 7 – Biggest share of spending per primary objective by Member States in 2015 (%)

Source: Commission services.

To complement the overview, Table 1 highlights the countries and objectives for which expenditure has increased or decreased significantly in both relative and absolute terms in 2015 compared to 2014. Table 2 and Table 3 provide State Aid scheme level information for the three most relevant cases by objective for which reported expenditure increased substantially (Table 2) or decreased substantially (Table 3) as % of GDP in 2015 compared to 2014.

For example, the increase in State Aid expenditure observed in Slovenia in 2015 on "Rescue and restructure" objective aid is almost fully due to the scheme designed to provide restructuring aid to Cimos d.d., a company operating as a supplier for the automotive sector. These idiosyncratic developments reflect large differences across Member States in the way they use state aid for attaining policy objectives.

Source: Commission services.

Regarding the **total state aid spending on co-financed projects**, since 2014, Member States must report the total amount of aid that is co-financed including both national and EU Structural Funds expenditure⁸. As a matter of fact, the significant decrease in reported spending following the inclusion of European Structural & Investment Funds in 2014 seems to indicate lower reported co-financed expenditures than could be expected⁹ (see [Graph 8](#)).

Graph 8 – State aid expenditure on co-financed projects in the European Union (in billions EUR), excluding Agricultural aid

Source: Commission services.

* The estimated compliance error measures compliance with the obligation to report both national and EU funding for co-financed project. Using the % of co-financing and the % of national funding provided in the reporting made before 2013, ceteris paribus, the estimated total spending expected in 2014 is about twice bigger than the reported one.

Total spending on co-financed projects decreased by about 2.1 billion EUR between 2014 and 2015. The strongest decrease has been recorded in Poland (-1.1 billion EUR),

⁸ Indeed, the corresponding projects are funded under the sole responsibility of the Member States and therefore financing granted under the Structural Funds qualifies as state aid, since the Community funds are integrated in the national budget and Member States are free to select beneficiaries (Art 107)

⁹ For some Member States, the discrepancy between data reported before and after 2014 could be explained by the fact that, before 2014, state aid providers reported already the data in SARI as the sum of the EU funding and national funding.

Hungary (-406 million EUR), Austria (-332 million EUR), Spain (-213 million EUR) and France (-200 million EUR). On the contrary, spending on co-financed projects increased by between 100 and 200 million EUR in the Czech Republic, the United-Kingdom and Slovakia. The decrease registered in 2015 can be explained by the transition to the new Multiannual Financial Framework of the European Union for the years 2014-2020, and the therefore relatively low share of co-financed expenditures in 2015.

Looking at expenditure by **aid instruments** ([Graph 9](#)), it is obvious that grants (including interest subsidies) remain the most popular aid instrument (63% of total expenditure) followed by tax exemptions (30% of total expenditure). Comparing 2015 to 2014, we can see that the share remains broadly the same for all instruments.

Graph 9 – Total State Aid by aid instruments, excluding Agricultural Aid, in 2014 and 2015 (millions EUR)

Source: Commission services.

Total State Aid expenditure as % of GDP in 2015, less railroads

State Aid expenditure as % of GDP, p.p. change over 2014-2015, less railroads

State Aid expenditure as % of GDP (total vs. Environmental protection including Energy saving), railways and agricultural aid excluded

State Aid expenditure by primary objectives in 2014 & 2015 (in millions EUR), railways and agricultural aid excluded

Share of State Aid expenditure by primary objective in the EU - 2014

Share of State Aid expenditure by primary objective in the EU - 2015

Share of spending by objective in 2015, without railways and agricultural aid
